	<p>There is a link in the creative lab scope technique page that lists this. I checked out the demo. Seems interesting anybody have any info on this or actually have one yet?</p>

	<p>Hi Sam,</p> <p>That's John Thompson's creation. I'm sure he will jump in here and answer any questions. I met John in North Carolina and he demonstrated a beta version of this tool. I placed the link there because the product has now just been released.</p> <p>If someone would have come to me with an idea like this, I would have said it was impossible. John has really done something here and put a lot of effort into it. I wish him the best of luck.</p> <p>And it uses the Pico hardware</p>
